

**Warwickshire Geological Conservation Group (WGCG)
Local Geological Site - LGS 38 Winderton Road Cutting Update 10 Jan 2017**

Grid Ref: SP 3414540850

Brief Description

A road cutting on the south side of the road that runs close to the south side of Compton Wynyates House revealing a section in the Northampton Sand Formation

Monitoring Report

The photograph below is not the full extent of the exposure; the other part is just behind (to the East) of this piece. This piece shown in the photo is being protected (?) by a medium sized probably Scots Pine. When this falls over in the next 5-10 years it will cause damage but hopefully expose a new face. Pieces of iron ore can be found on the ground. The site could benefit from some strimming and digging out of the talus build up.
