Warwickshire Geological Conservation Group

Warwickshire Local Geological Site				
Site No: 45	Temple Grafton Quarry			
Geological Formations	Blue Lias Formation - Wilmcote Limestone Member (Triassic)			
Criteria Form		p 2		
Description		p 3		
Photographs		p 4		
Location Map		p 5		

Local Geological Sites (LoGS), designated by locally developed criteria, are currently the most important places for geology and geomorphology outside statutorily protected land such as Sites of Special Scientific Interest (SSSI). The designation of LoGS is one way of recognising and protecting important Earth science and landscape features for future generations to enjoy.

WGCG is responsible for the identification of LoGS in Warwickshire and the West Midlands.

Please note that designation of a site as a LoGS does not confer a legal right of access. Unless the site is on a designated public right-of-way, the landowner's permission is required before visiting.

Warwicksh	ire L	ocal Geological S	lite - (Criteria Forn	n	
Site name: Temple Grafton Quarry		Also known as:				
District: Stratford-on-Avon		County: Warwickshire				
Grid reference: SP 1211 5395	LoGS Number: 45		ESCC Class:	ED		
Brief Description: Disused q Member of the Blue Lias Form currently taking place.	•					one
This site qualifies as a Local	Geolog	ical Site for the follow	wing cı	riteria:		
A Good Example of the Wiln	ncote L	imestone Member and	the ass	sociated Holocene	tufa

WARWICKSHIRE GEOLOGICAL CONSERVATION GROUP LOCAL GEOLOGICAL SITE (LoGS)

Site	45	Temple Grafton Quarry		
Parish	•	Temple Grafton		
District		Stratford-on-Avon		
County		Warwickshire		
National Grid Ref	erence	SP 1211 5395		
Ordnance Survey	Sheets 1:50000	150		
	1:10000	SP 15 SW		

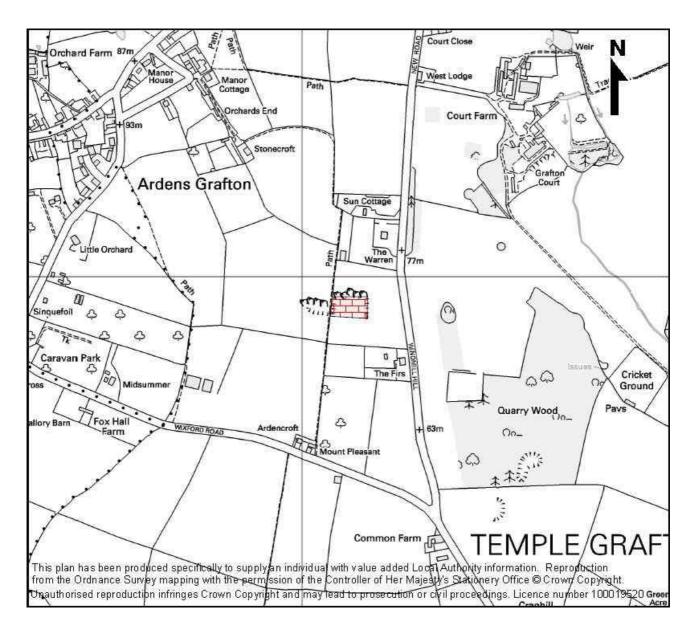

Location

Located at Sun Cottage, New Road, Temple Grafton. Mr Thompson, the owner, is a landscape gardener and very keen on conservation. Access was improved & the faces were cleared of vegetation and much talus removed by mini-digger (2009)

Summary of Interest

An exposure in a disused quarry of the 'Lithographic Limestone' from the Wilmcote Limestone member of the Lower Jurassic Blue Lias Formation which contains insect beds. Beneath this there is a partial exposure of the uppermost Triassic. Currently (2009) tufa is forming by deposition on mosses.
